	Iscaguard BA	Benzyl Alcohol	Preservative	0.60	Brenntag
		Parfum	Fragrance	QS	

Method

1. Weigh out deionised water into main vessel and add phase A materials individually, with mixing between additions. Mix until completely dissolved.
2. Whilst mixing under a fast vortex sprinkle in phase B and mix until fully dispersed.
3. Add phase C and mix until uniform. Start heating to 60°C.
4. At 60°C add phase D to the main vessel and mix until dissolved and homogenous.
5. Continue heating until temperature reaches 70 - 75°C.
6. In a separate vessel combine phase E and heat to 70 - 75°C with occasional mixing.
7. At temperature add step 6 to the main vessel and homogenise until smooth and uniform.
8. Cool to below 40°C with mixing.
9. Below 40°C add phase F individually, with good mixing between additions. Mix until smooth and uniform.
10. Ensure final pH is 4.00 – 5.00
