Preparation procedure

1. Weigh out Deionised water into main vessel and add Phase A materials individually, with mixing between additions until completely dissolved.
2. Add Phase B materials individually to the main vessel and and mix until uniform.
3. Add Phase C to the main batch and stir to distribute. Then homogenise until smooth and uniform.
4. In a separate vessel combine Phase D and Phase E with mixing. Mix until Phase E is uniformly dispersed.
5. Add Phase F into Stage 4 pre-mix and mix until dissolved.
6. Combine Stage 5 with Stage 2 and homogenise briefly until smooth and uniform.
7. Add Phase G into main batch and mix until smooth and uniform.
