Preparation procedure

1. Weigh out water and add remaining Phase A materials individually, with mixing between additions. Mix until completely dissolved.
2. Add Phase B into Phase A and mix until smooth and uniform. Start heating to 75°C.
3. In a separate vessel weigh out Phase C and start heating to 75°C.
4. At temperature, add Phase D into Phase C and mix until smooth and uniform.
5. Add Stage 4 to the main batch and homogenise until smooth and uniform.
6. Allow slight cooling to 60°C then add Phase E to the main batch and homogenise until air is introduced.
7. Pre-mix Phase F and Phase G separately.
8. Cool main batch to below 40°C and then add Phase F and Phase G pre-mixes to main batch and mix until smooth and uniform.
9. Add Phase H materials individually and mix until uniform.
